SEPTEMBER 7th & 8th

St. Joseph Bay Coastal Ecosystem Water School

The St. Joseph Bay Ecosystem is home to one of the richest concentrations of marine grasses along the Northern Gulf Coast. It supports an amazing diversity of fish, aquatic invertebrates and birds. Other local habitats of significance include nesting beaches of loggerhead sea turtles, salt marshes that support secretive marsh birds, and pine flatwoods uplands.

This two-day educational adventure is based at the St. Joseph Bay State Buffer Preserve near the coastal town of Port. St. Joe, Florida. It includes field tours of unique coastal uplands, presentations by scientists and naturalists, and a kayak trip to explore the underwater life of the seagrass beds.

There are several ticket options for this water school to choose from at [Eventbrite.com](https://www.eventbrite.com)

For more information please contact Erik Lovstrand at 850-653-9337 or elovstrand@ufl.edu
