UNIVERSITY OF FLORIDA, ADMINISTRATION

Dr. Bernie Machen, President, University of Florida

Dr. Jack Payne, Vice President for Agriculture and Natural Resources

Dr. Geoffrey Dahl, Chair and Professor, Animal Sciences

Dr. Nick Comerford, Professor and NFREC Center Director

Dr. Cliff Lamb, Professor and NFREC Assistant Director

Mr. David Thomas, Beef Unit Manager and Bull Test Foreman

TERMS AND CONDITIONS

- 1. Each bull will be sold to the highest bidder.**
- 2. The auctioneer will settle any dispute as to bids.**
- 3. The terms of the sale are cash or check payable to the: Florida Cattlemen's Association.**
- 4. Each bull becomes the risk of the new owner as soon as sold in the auction ring. However, every precaution will be taken for the safety of all bulls until they are loaded.**
- 5. All bulls will be fed and looked after for a period of 4 hours after the sale unless other arrangements are made.**
- 6. The owner for each bull sold will furnish a certificate of registry, properly transferred. Any exceptions will be announced from the auction box.**
- 7. Health certificates will be furnished on each bull sold upon request.**
- 8. All bulls have passed a breeding soundness exam and should have the ability to settle healthy cows with the exception of: A) Injury or disease occurring to the bull after the sale. B) Gross negligence or willful misconduct on the part of the purchaser. Concerns regarding the fertility of the bull should be resolved between purchaser and consignor.**
- 9. A consignor may not "no sale" a bull during or after the sale.**
- 10. The sale is a contract between the consignor and the buyer. The University of Florida, the Florida Cattlemen's Association, their employees, and representatives are merely facilitators and not parties to the contract.**

**ALL PERSONS WHO ATTEND THIS
SALE DO SO AT THEIR OWN RISK.**
**THE OWNERS AND SPONSORS ASSUME
NO LIABILITY LEGAL OR
OTHERWISE, FOR ANY ACCIDENTS OF
ANY NATURE.**

Dear Cattlemen:

Welcome to the 14th Annual Florida Bull Test Sale. The objective of this test is to evaluate the performance potential and breeding soundness of bulls consigned. This year was the third year in which individual feed efficiency was established on all bulls.

The Florida Bull Test consists of a 112-day performance test plus a breeding soundness evaluation on every bull that qualifies for the auction. Bulls arrive at the NFREC Feed Efficiency Facility, are sorted into contemporary groups, and moved into pens where bulls adapted to soy hull and corn gluten-based and water for a three week adaptation period before initiating the test. The bulls remained in the Feed Efficiency Facility for the first 56 days of test after which they were moved out of the facility to 3.25 acre pastures for the remaining 56 days of test. They received the same diet throughout the test. Animal performance, specifically average daily gain (ADG), was calculated using only the official starting and finishing test weights. Throughout the test bulls were observed and screened for structural soundness and disposition. Bulls deemed to be structurally unsound or poor disposition did not qualify for the sale.

The target was to achieve an ADG of 3.5 lb/day. As you may note the bulls averaged an ADG of 3.45 lb/day. The average weight per day of age was 2.89 lb/day. Average daily feed intake during the first 56 days of test was 20.45 lb/day (on a dry matter basis) and average feed:gain ratio of 6.94 pounds of feed for every pound of gain.

A significant portion of the test is the inclusion of feed efficiency of individual bulls. To rank the bulls on feed efficiency we use residual feed intake (RFI), which is the difference between actual feed intake and expected feed intake. The more negative the number is, the more efficient the bull is. During this bull test the RFI of bulls ranged from -6.46 to 5.89 lb/d. **Therefore, the most efficient bull consumed 6.46 lb per day less feed than expected for his gain. This equates to more than 2,300 lb per year less feed than that bull was expected to consume!**

Our staff has worked hard to provide the best care possible for these bulls. We believe each bull has been given the chance to express his own genetic potential for performance and fertility. Thank you for making our sale stronger year after year. We look forward to visiting with you about the bulls either before or on sale day.

Sincerely,

Florida Bull Test Committee

BULL TEST LOCATION

The sale will be held in the sale pavilion at the NFREC-Marianna Beef Unit, home of the Florida Bull Test. The Beef Unit/Bull Test is located 1.4 miles west on highway 162 from the traffic light in Greenwood. The unit is 11.4 miles east of highway 231 on highway 162. From I-10, take highway 71 north at exit 142, through Marianna to Greenwood (approximately 11 miles). An alternative for those coming from the east on I-10 is to exit at 152 at Grand Ridge and take highway 69 to Greenwood. From Dothan, AL take highway 231 south and turn left on highway 162 (look for green bull test sign).

**ANNOUNCEMENTS FROM THE AUCTION BOX WILL TAKE PRECEDENCE OVER
THE PRINTED MATTER IN THIS CATALOG AND ALL OTHER ANNOUNCEMENTS**

SALE ORDER: The sale order is determined by test index.

Index = average daily gain (ADG) on test + weight per day of age (WDA) at the end of the test.

ELIGIBILITY FOR SALE: Bulls eligible for the sale indexed 90 or greater on the test.

SALE ORDER BY BREED

DEFINITION OF TERMS

- BW Birth Weight EPD** - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.
- WW Weaning Weight EPD** - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.
- YW Yearling Weight EPD** - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.
- M Maternal Milk EPD** - is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.
- Scrotal Scrotal Circumference EPD** - expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.
- IMF Marbling EPD** - expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.
- REA Ribeye Area EPD** - expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.
- BF Fat Thickness EPD** - expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.
- ADG Average Daily Gain** – average daily gain on test during the 112 day FL Bull Test
- WDA Weight per Day of Age** – Weight per day of age from birth until the end of the final weight of the FL Bull Test

\$VALUE INDEXES

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

- \$API All-Purpose Index** - is the expected average performance of progeny of Simmental bulls used on the entire Angus cowherd, with a portion of the daughters being retained for breeding and the remaining progeny being put on feed and sold grade and yield.
- \$TI/TSI Terminal index** - is the expected average profit per carcass of progeny of bulls mated to British-cross cows, with all offspring placed in the feedlot and sold grade and yield. It includes growth and carcass information only.

\$BMI This is an index to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows. Retained ownership of calves through the feedlot phase of production is maintained and the cattle are to be marketed on a CHB pricing grid.

\$CHB This is a terminal sire index, where Hereford bulls are used on British-cross cows and all offspring are sold as fed cattle on a CHB pricing grid. There is no emphasis on milk or fertility since all cattle will be terminal. This index promotes growth and carcass.

\$W **Weaned Calf Value** - an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

\$F **Feedlot Value** - an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

\$B **Beef Value** - an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

FEED EFFICIENCY DATA:

Feed Efficiency Rank Ranking from most efficient (low ranking) to least efficient (high ranking) compared to all bulls in the FL Bull Test.

Intake The pounds (on a dry matter basis) consumed on a daily basis during the 56 day feed efficiency portion of the test.

F:G The pounds of feed consumed per pound of gain per bull during the 56 d feed efficiency portion of the test.

RFI The residual feed intake was calculated as the difference between actual average daily feed intake and expected daily feed intake for each bull based on their average daily gain on test during the 56 d feed efficiency portion of the test. This value was used as the criteria for Feed Efficiency Rank. Bulls with a low RFI are more efficient than bulls with a high RFI.

Adjusted Because ultrasound measurements are taken on a single day bulls vary in age. Therefore, measurements are adjusted to be on an equal age basis so that bulls may be compared with each other. When comparing ultrasound data between bulls, adjusted measurements are more reliable.
