

Cold Hardiness

Freeze Protection (Passive and Active)

- Plant on a hill with a south or southwest slope.
- Avoid low lying locations.
- Do not fertilize after early August.
- Microjet irrigation for freeze protection.
- Tree wrap or soil mounding for freeze protection.
- Tree covers if dealing with a small number of trees.

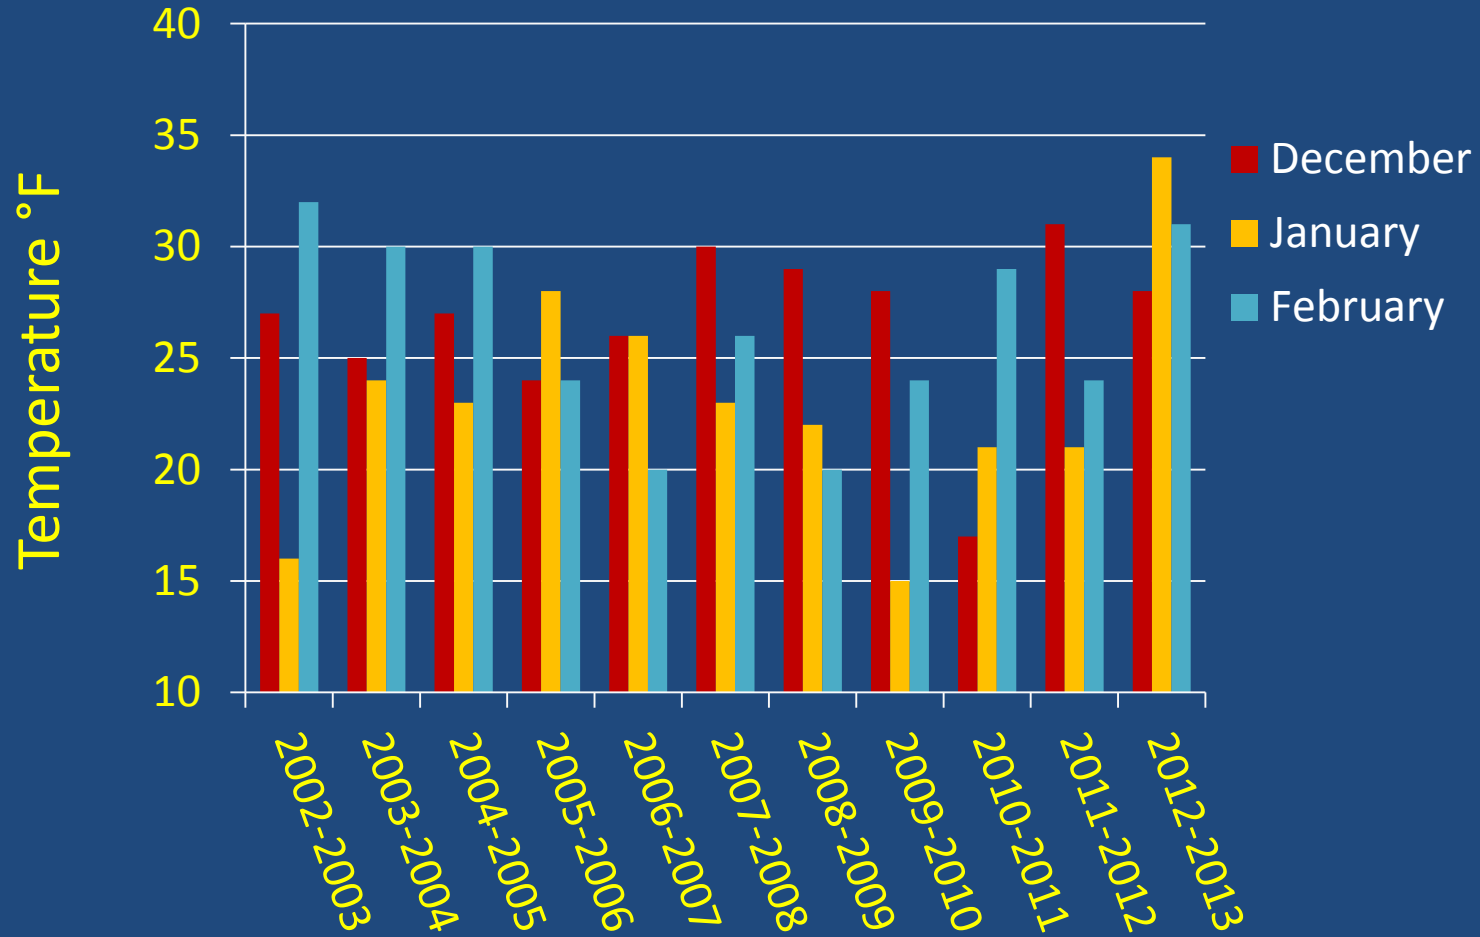

Microjet issues

- Filters required. The smaller the orifice size the more plugging.
- Can combine microjet with soil mounding or tree wraps.
- Microjets can be your sole irrigation system. Direct spray to trunk and major limbs of tree. After freeze period redirect spray to soil.
- Available patterns 90, 180, 270 or 360 degrees
- Can attach to stake if desired.

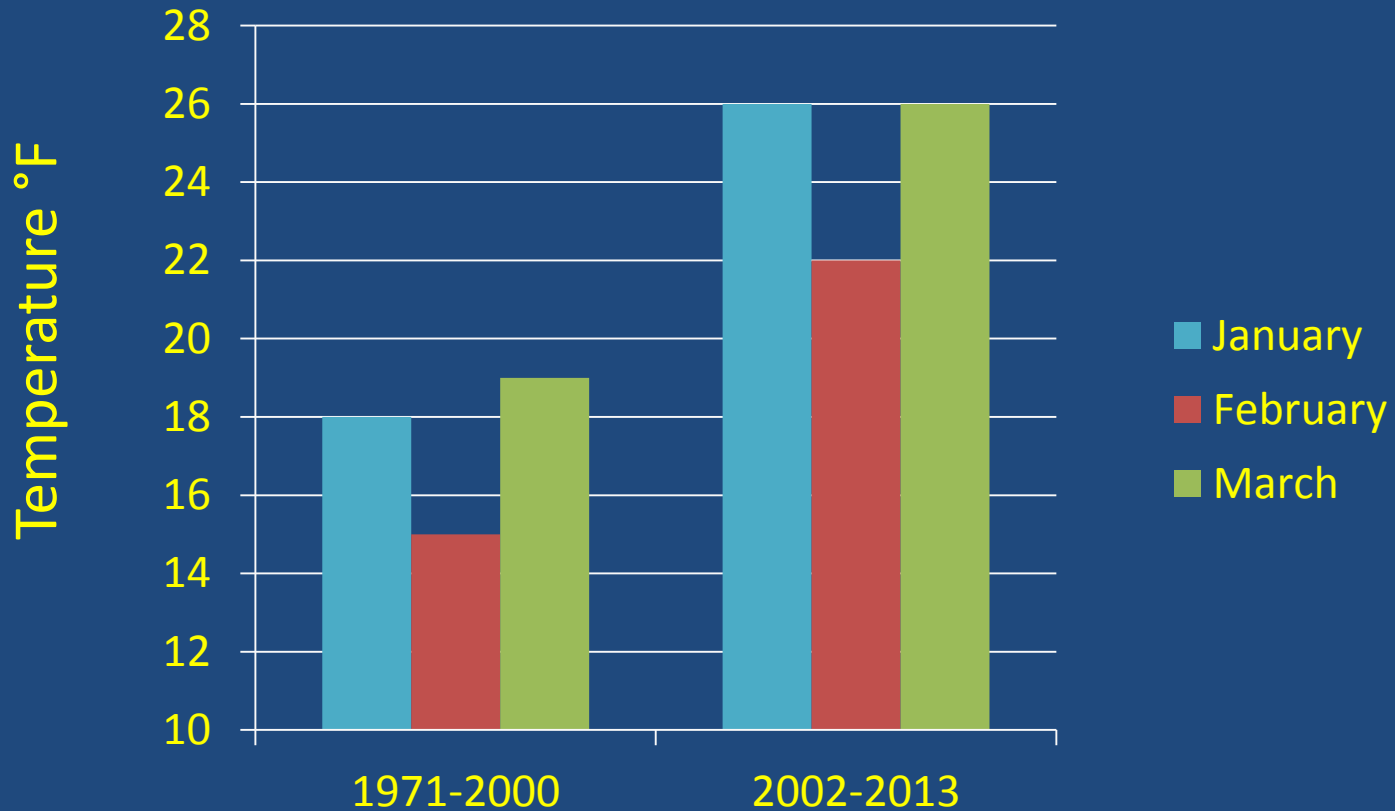

Microjet irrigation frost protection

- Black 0.8 mm 8 gal/hr
 - Blue* 1.0 mm 14 gal/hr
 - Green 1.3 mm 22 gal/hr
 - Red 1.5 mm 33 gal/hr
 - White 2.3 mm 58 gal/hr

Cost of Well

Diameter	gal/min	Cost of Install
• 4	50	\$9,000
• 6	200	\$22,000
• 8	500	\$35,000
• 10	700	\$85,000
• 12	1,200	\$130,000

What Happened When the Pump Failed

- Conditions
- Microjet irrigation started 5:30 pm. Temp = 35 F
- Irrigation ran all night. Wind speed = 10-15 mph. Minimum temp. = 18 F
- Pump failed at 9:30 am. Temp. = 21 F
- Entire irrigation lines frozen in 15 minutes
- Ice remained on trees until Wednesday afternoon

Ranking of Freeze Tolerance

- For mature trees ranking:
 - Satsuma (Trifoliate orange rtsk) most tolerant - No damage.
 - Mature Navel and Honeybell (Carizzo rtsk)- Tip burn.
- For young trees (All Swingle rtsk) ranking:
 - Satsuma - little or no damage.
 - Sugar Belle - 9 of 16 survived. Trunk sprouts. Slight leaf burn.
 - Tango - 2 of 16 trees survived. Trunk sprouts. Most trees killed above soil mound.
 - Minneola Honeybelle - 0 of 16 survived. Some trunk sprouts. Trees killed above soil mound.
 - Early Pride - 0 of 16 survived. Some trunk sprouts. Trees killed above soil mound.

Cold Hardiness of Rubidoux versus Flying Dragon
