Educational Program Focus:

4-H Youth Development

My goal for the Calhoun County 4-H Program is to provide opportunities for local youth to develop life skills, leadership, and a sense of responsibility through community-based clubs and projects, workshops, day and residential camps, and competitive events. Additionally, Calhoun County 4-H will provide classrooms and teachers with experiential programs to further enhance life skills through 4-H in the Classroom programs.

In order to fulfill these goals, I will rely on a group of local volunteers to help implement the programs in clubs and the classroom. The volunteer program will be a pathway for parents and others in the community to contribute their invaluable time and talents to help educate and facilitate the growth of local youth.

Family & Consumer Science

My goal for the Family and Consumer Science Program in Calhoun County is to provide and implement educational programs across a broad spectrum of age ranges and experiences. Educational programs of interest will include, but are not limited to: nutrition, career development, and financial independence. These programs will ultimately provide individuals tools to lead in their homes and communities.
